Usage of LED indicators

Description	LED
By activation of each input, the respecting LED turns on	X0 ~ X3
By activation of each output, the respecting LED turns on	Y0 ~ Y1
Stands for POWER and it turns on once the input voltage is applied	PWR
When the PLC is ready for operation, this LED turns on.	RUN
This LED turns on when connected to either of the networks	RS 232/485
This LED is inactive	EXP
Once the voltage violates the permissible limits, this LED turns on	ERR
